**DETAILED ACTION**

***Election/Restrictions***

Applicant's election without traverse of Group II, claims 13-17, in Paper No. 11 is acknowledged. Claims 1-12 and 18-25 have been cancelled. It should be noted that applicant failed to make a species election set forth in the previous restriction. In order to expedite prosecution, species 57 is examined and set forth below.

***Claim Rejections - 35 USC § 112***

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 13-17 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. This is a written description rejection.

Claims 14 encompass a method of using an orphan protein of SEQ ID NO:57 whose function is not known as well claims 13 and 15-17 which encompasses a large genus of estrogen regulated marker. However, the specification only discloses working example of a specific species of SEQ ID NO: . University of California v. Eli Lilly and Co. (CAFC) 43 USPQ2d 1398 held that a generic claim to human or mammalian when only the rat protein sequence was disclosed did not have written description in the specification. Thus, the disclosure does not have written description for the large genus

of estrogen regulated marker. One skilled in the art cannot envision all the estrogen regulated markers. Furthermore, the orphan protein of SEQ ID NO:57 has no known function and the nexus between the orphan protein and disease is lacking.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Art Unit: 1646

Claims 13 and 15-17 rejected under 35 U.S.C. 102(b) as being anticipated by

Mendelsohn et al.(US 5,728,534).

Mendelsohn teaches method fo estrogen responsive compounds in vascular cells, cancerous cells, pre-cancerous cells, uterine cells, breast cells and non vascular-non reproduction cells(columns 2-3 and 10-11) using reporter responsive to estrogen (column 11-12). Mendelsohn assays two different cells simultaneously and different reporters (columns 8 and 9).
